ENTSO G

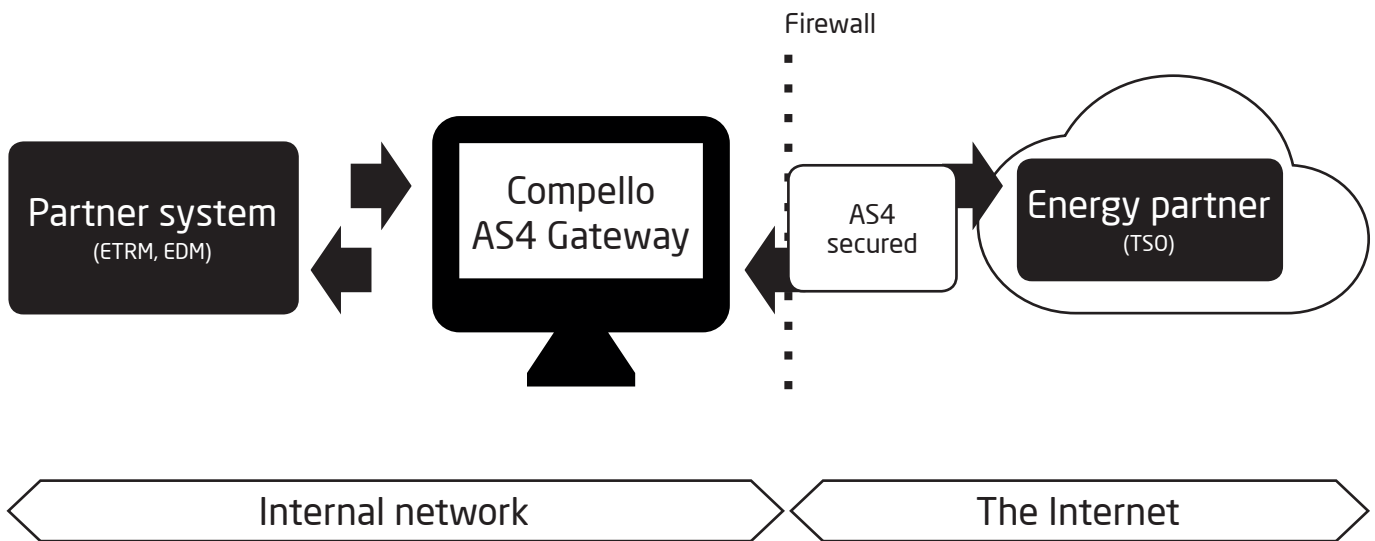

AS4 – Data exchange for the future

AS4 (Application statement 4) is the **new and safe standard protocol based on web services for energy market communication with gas transmission companies (TSOs) in Europe.**

In use in many European countries from 2017, this is a mandatory protocol for **transmission system operators and their counterparts that exchanges messages regarding accounting and congestion management.**

Are you ready for the AS4-future? Please, contact us.

Compello AS4 Gateway as stand-alone version

Future-proof with Compello AS4 Gateway

Future-proof with Compello

With Compello AS4 Gateway you are well set up for future transport capacity management in gas.

Compello AS4 Gateway fulfills the **ENTSO**G standard for gas transmission companies (TSO).

Trust in Compello

Both the data exchange format XML defined in the standard as well as AS2 communication which is similar to AS4 communication have been supported by our systems, for several years.

Are you looking for an AS4-solution beyond the gas sector?

Contact us. We offer an applicable extension for the power sector or to meet your specific requirements.

Compello AS4 Gateway is available as:

- Stand-alone version – to be installed additionally to existing market communication platform
- Extension module for Compello Connect
- OEM version

Are you ready for the AS4-future? Please, contact us.
